Notes for Infection Risk:
May take about 24 hours before aerosolizes settles on surfaces.
Low Risk: in space < less than 15 minutes and wearing mask. – target frequently touched surfaces.
Med Risk: in space > than 15 minutes, wearing a mask – target frequently touched surfaces.
High Risk: in space > than 15 minutes, NOT wearing a mask – target all surfaces.
Based on an article from the New England Journal of Medicine discussing the survivability on surfaces--virus is not viable on any surfaces after 7 days.
