

Student COVID Management Process Tree 10/13/22

STUDENT HAS A POSITIVE COVID TEST OR REPORTS COVID SYMPTOMS

Instructor

- instructs the student to stay home
- tells the student to complete the [Interactive Decision Chart for COVID](#) online ASAP. This will give the student next step instructions as well as has them complete an Appendix C.
- Determines if the student was on campus 48 hours prior to symptoms or positive test

Instructor Notifies their Dean

The Appendix C generates a notice to the COVID Response Team at covid@losrios.edu. The contact tracer contacts the student and completes the rest of the appendix C. Contact tracer reports back to the COVID Response Team, instructor and Dean with class exposure template if applicable and the students return to campus date (RTC).

Instructor sends a Student Exposure Notification Template to the class

*Note: if the student has had a positive COVID test and you have not heard from the contact tracer prior to your next class the instructor can go ahead and send out the [student exposure notification](#) after filling out the red areas in the notification.

For questions about this process contact the COVID Response Team at COVID@LosRios.edu

*All activities done by the contact tracers are supervised by the college nurse
